Dear David

Just a note to let you know how pleased I am with your Aitecs Sep-21S Auto dual channel syringe infusion pump.

It's customized programmability allows me to infuse Propofol and Remifentanil in separate syringes and to configure the infusion to my specifications. The drug profile function allows me to retain those drug profiles for future use with minimal button pushing.

The pump has been reliable, your customer support has been excellent and you have been a pleasure to deal with.
